

HOW PHOTONICS CAN SUPPORT YOU

Photonics is increasingly used in the manufacturing and operation of mobility systems and infrastructure, making roads, railways and airspace safer, more efficient and more sustainable. Applications include structural health monitoring with fibre optical sensors, intelligent lighting with LED and laser systems, and 3D laser scanning for autonomous

unmanned aerial vehicles UAVs). Photonics is improving energy efficiency, supporting safer rail networks and replacing large aircraft with small UAVs equipped with lightweight sensors and imaging systems.

Start your photonics innovation journey with our support.

DEMO & EXPERIENCE CENTRES

In addition to providing innovation support, PhotonHub Europe acts as a one-stop-shop matchmaker between European SMEs and the existing European ecosystem of photonics training providers. This extensive training offering is presented as a single online catalogue of the European Photonics Innovation Academy.

ONSITE TRAINING OPPORTUNITIES

Discover photonics at the one-day Demo Centres and become fully immersed at the three-day hands-on Experience Centres situated across Europe.

Specialty Optical Fibres for Sensing Applications in Industry

Demo Centre by RISE

Optics and Freeform Optics

Experience Centre by VUB B-PHOT

Integrated Polymer Photonic Systems

Experience Centre by VTT

FREE ONLINE INTRODUCTORY TRAINING OPPORTUNITIES

Half-day online sessions are delivered throughout the year.

View our complete training schedule and register your interest at ecosystem.photonhub.eu or by scanning the QR code.

DISCOVER

how PhotonHub can support your business with photonics

**PhotonHub
Europe®**

PHOTONICS INNOVATION HUB
FOR EUROPE

PHOTONICS²¹

PHOTONICS PUBLIC PRIVATE PARTNERSHIP

DISCOVER HOW YOU CAN

- ✓ **Achieve smart, durable lighting**
by using LED and laser systems
for vehicles, roads, and runways
- ✓ **Improve safety with sensors**
by monitoring vehicles, planes,
railways, and drivers' attention
- ✓ **Enhance autonomous mobility**
through 3D awareness with
photonics sensors and LiDAR

Explore all possibilities
on photonhub.eu

Avail of a
**free initial
assessment
by top experts**

for European
SMEs

Delve into how your
business could minimise
the risk and expense
of deep technology
innovation through
"test-before-invest"
support from PhotonHub.

**PHOTONICS IN
MOBILITY**

INNOVATION FROM RUNWAYS TO RAILWAYS

LiDAR technology for providing fast 3D situational awareness

Segmented LED and laser headlights are safe, and smart with no glare

DEVELOPING ADVANCED LENS SYSTEMS FOR AUTONOMOUS VEHICLES

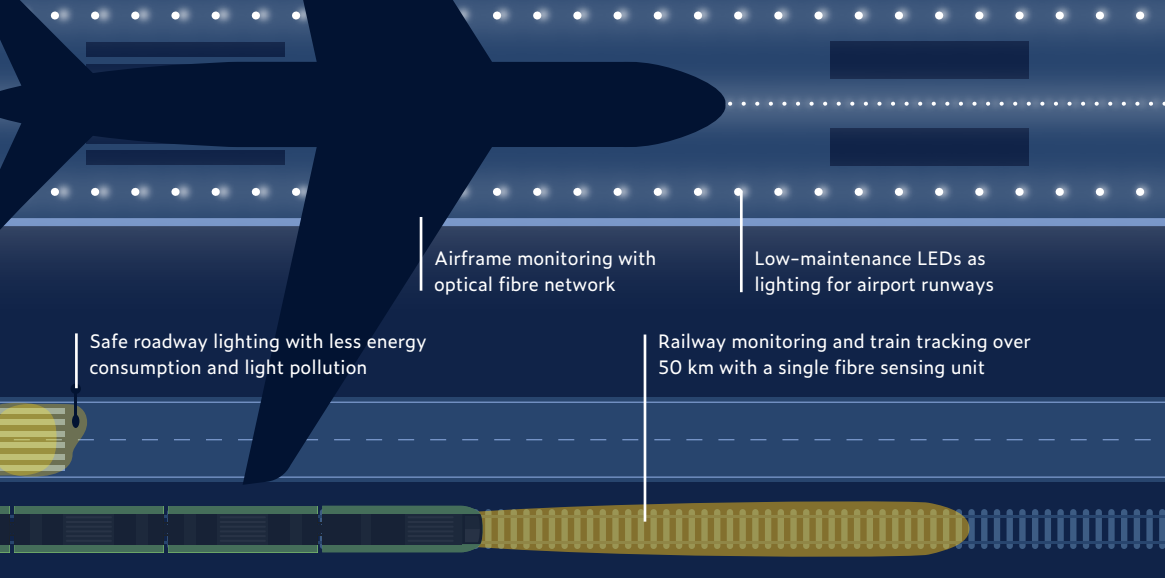

The Imaging Source specialises in the design and manufacture of lens arrays using free-form optics for various applications in the field of autonomous vehicles. Their goal is to develop a passive lens system that can be mounted on high-resolution sensors and cameras, with a 6-lens multifocal optical component with different image planes. To achieve this, they have partnered with the Vrije Universiteit Brussel (VUB) in Belgium to help design and manufacture this innovative optical system.

INNOVATIVE LOW-COST PHOTONICS FOR AUTONOMOUS VEHICLES

Ommatidia LiDAR aims to demonstrate a low-cost, high-volume production of LiDAR systems for fully autonomous vehicles. The sensor, similar to the compound eye of an insect, can operate in a complex environment in 3D with high resolution and long-range capabilities. Ommatidia is currently working with Technical Research Centre of Ireland (TRCI) at Tyndall - UCC in Ireland, Ommatidia aims to provide a scalable, reliable, and low-cost technology for the automotive industry.

Airframe monitoring with optical fibre network

Low-maintenance LEDs as lighting for airport runways

Safe roadway lighting with less energy consumption and light pollution

Railway monitoring and train tracking over 50 km with a single fibre sensing unit

PHOTONICS INNOVATION PROJECTS

LOW-COST LIDAR SYSTEMS FOR VEHICLES

demonstrate the feasibility of low-cost LIDAR systems for autonomous vehicles. Their bio-inspired system, inspired by the compound eye of insects, images the environment with high resolution and range. Using low-power illumination, it achieves megapixel resolution and range. Using low-power illumination, it achieves megapixel resolution and range. Using low-power illumination, it achieves megapixel resolution and range. Partnering with VTT and Immatidia aims to bring this technology to the market.

REVOLUTIONISING ROAD SAFETY AND MAINTENANCE WITH INNOVATIVE SENSOR TECHNOLOGY

Heller Consult sp. z.o.o. enhances road safety and infrastructure maintenance through dynamic vehicle weighing (Weigh-In-Motion). In collaboration with Warsaw University of Technology (WUT) in Poland, they have developed a unique sensor system. This technology measures pavement deflection under vehicle load and recalculates axle and gross vehicle weights. The system promises more accurate and efficient road maintenance and safety management.
